

# To engage in safe commerce, you need documents you can trust.

- It's impossible to trust the validity and accuracy of COAs
- Fraud risks increase as documents are shared
- There is no reliable system to track, review, and share COAs

Enterprises in high-risk industries such as cannabis, CBD, and nutraceuticals cannot engage in safe commerce without a secure way to track, store, and share COAs and other critical documents. Fraud, human error, and inaccurate test results put everyone in the supply chain at risk.

## Earning trust is easy with Q-Vault™.

Meet **Q-Vault™**.

The Q-Vault is an advanced document management and security system powered by blockchain technology that empowers businesses in high-risk industries with efficient collaboration and document-sharing capabilities.

**Q-Vault™**  
Information Request Form

Safe commerce in action, powered by blockchain technology

Support sharing and collaboration with an omnichannel e-commerce solution

Access accurate, complete, and comprehensive document history

With Q-Vault™, reliable COA and document management is simple. Q-Verified labs submit all documents directly from the testing equipment into the blockchain, eliminating the risk of fraud or human error. Share documents publicly or transfer them between enterprises with secure link-sharing capabilities that support safer commerce for everyone in the supply chain.

Get In **Qredible®**.

“It’s critically important that all CBD, hemp, and cannabis associations, along with companies that deal with consumables have access to this platform.”

~ Kelly Ann Bortman, President and Founder at Covalent
