

Your SaaS Automation Center

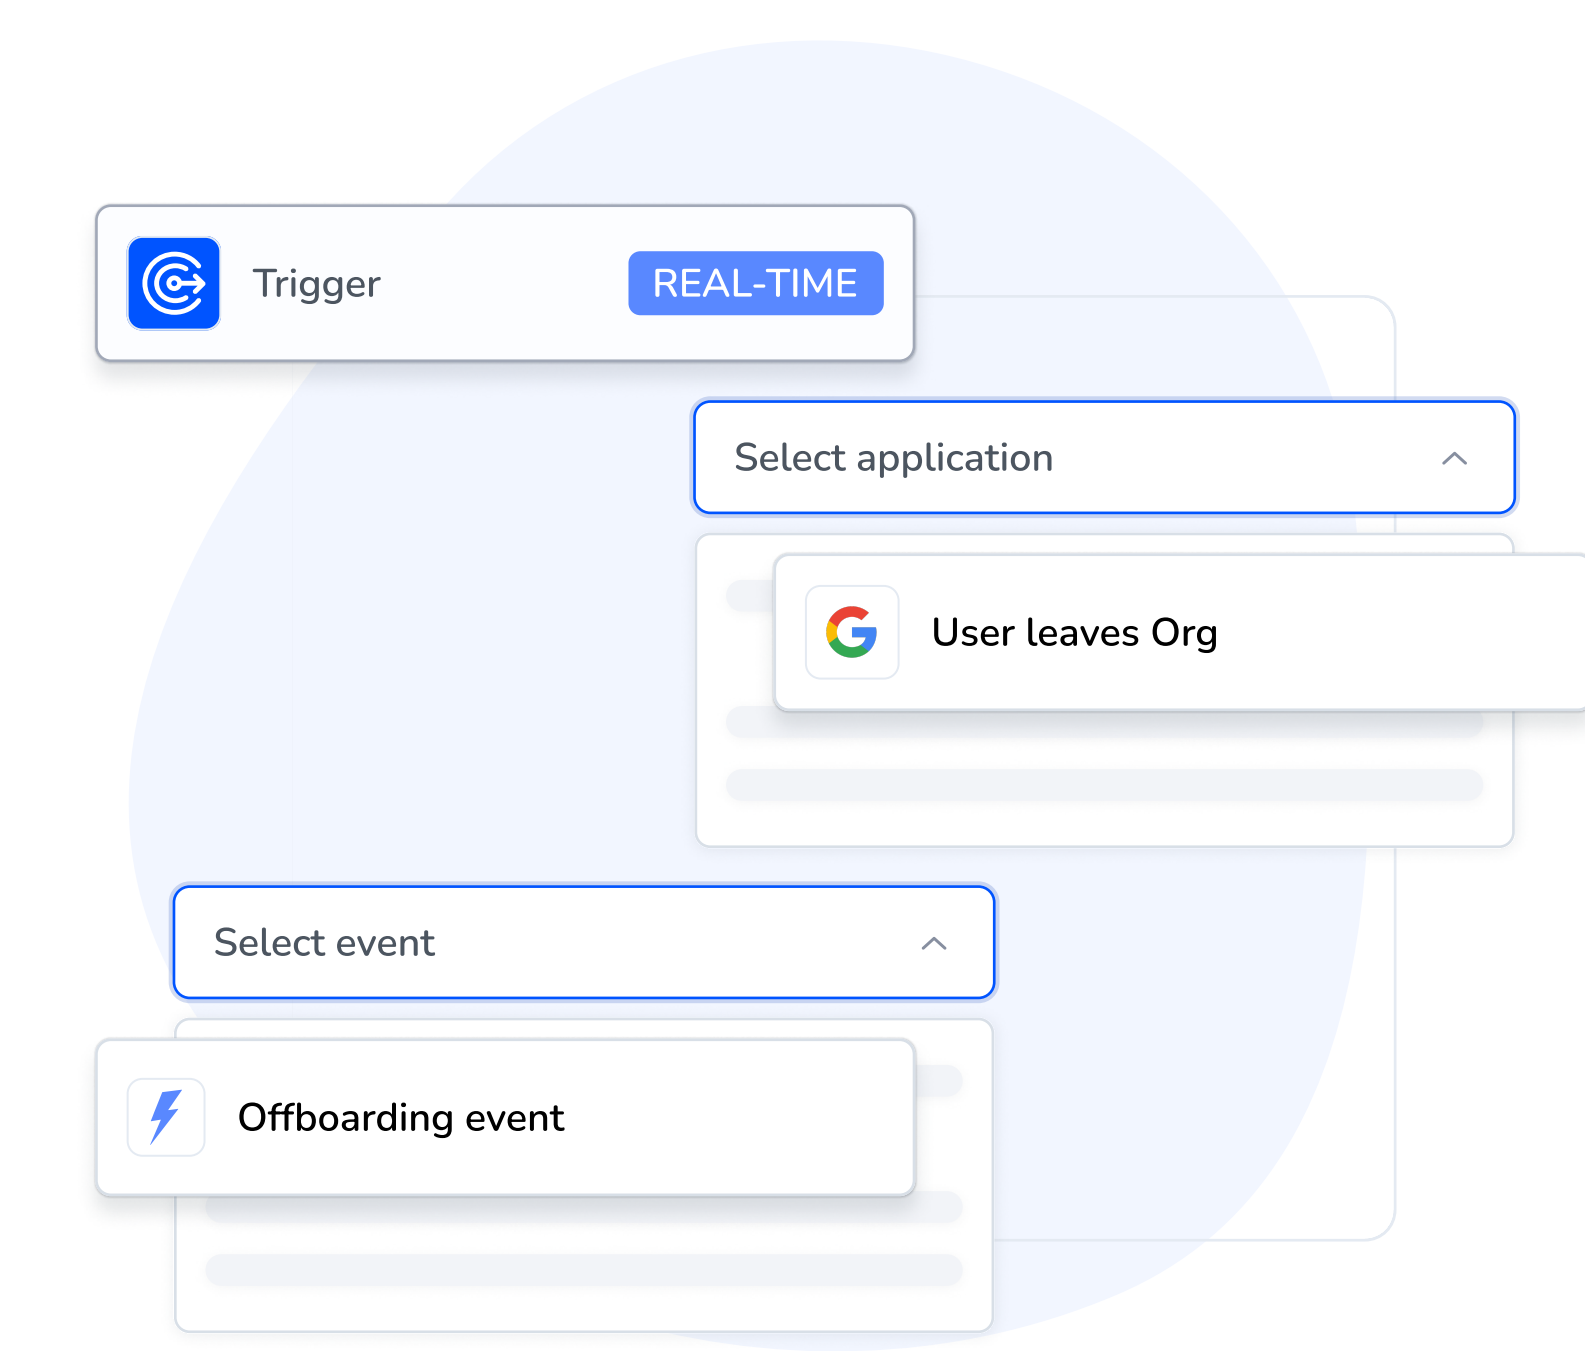

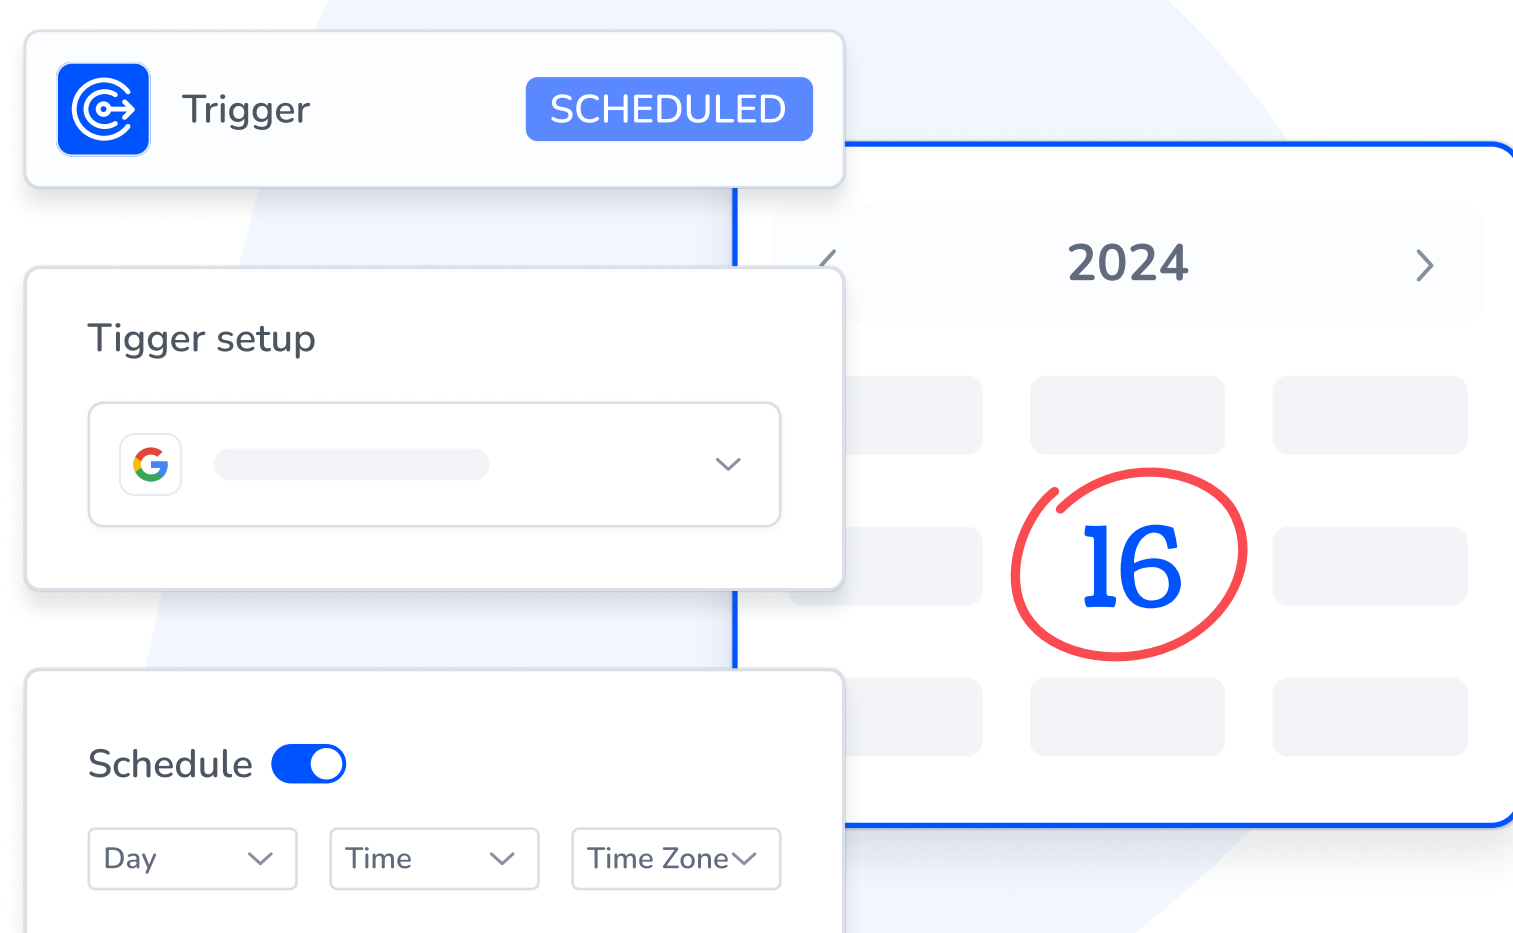

Replace manual tasks with customizable workflows so your employee & application management can run on autopilot

Put Employee Lifecycle Management On Autopilot

Automate Employee Onboarding

Schedule onboarding workflows tailored to specific roles, departments, and beyond. Empower employees with automatic access to the tools they need, right when they need them. It's onboarding, reimagined.

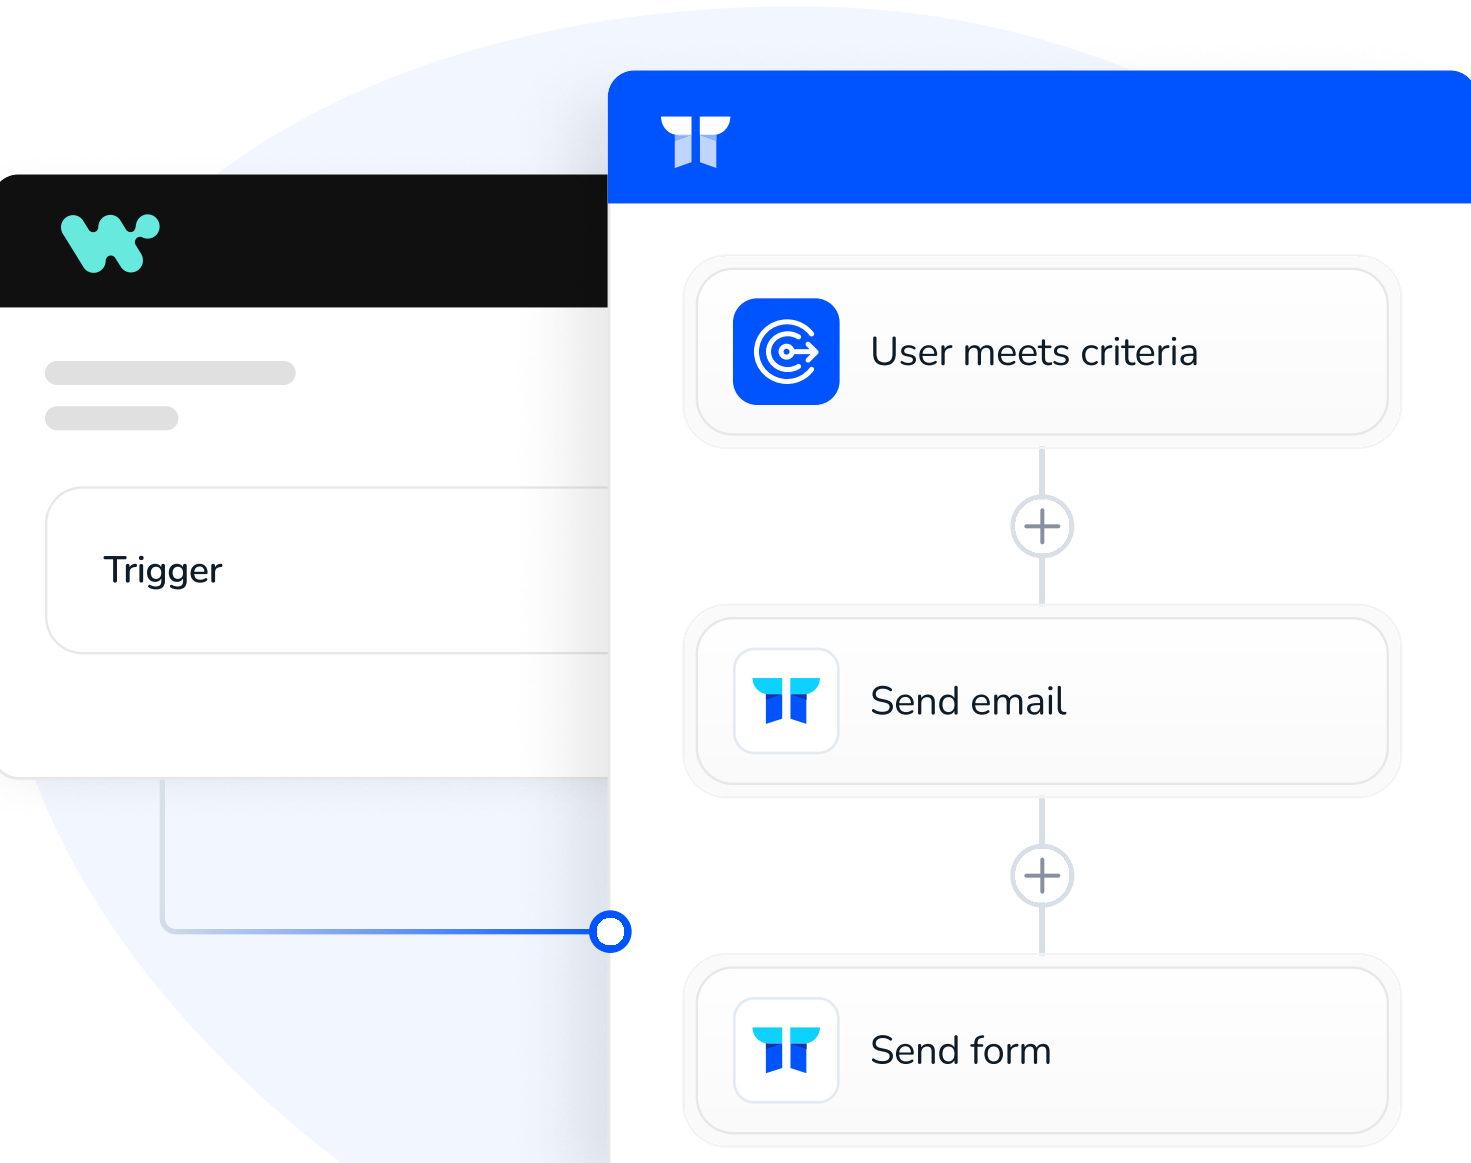

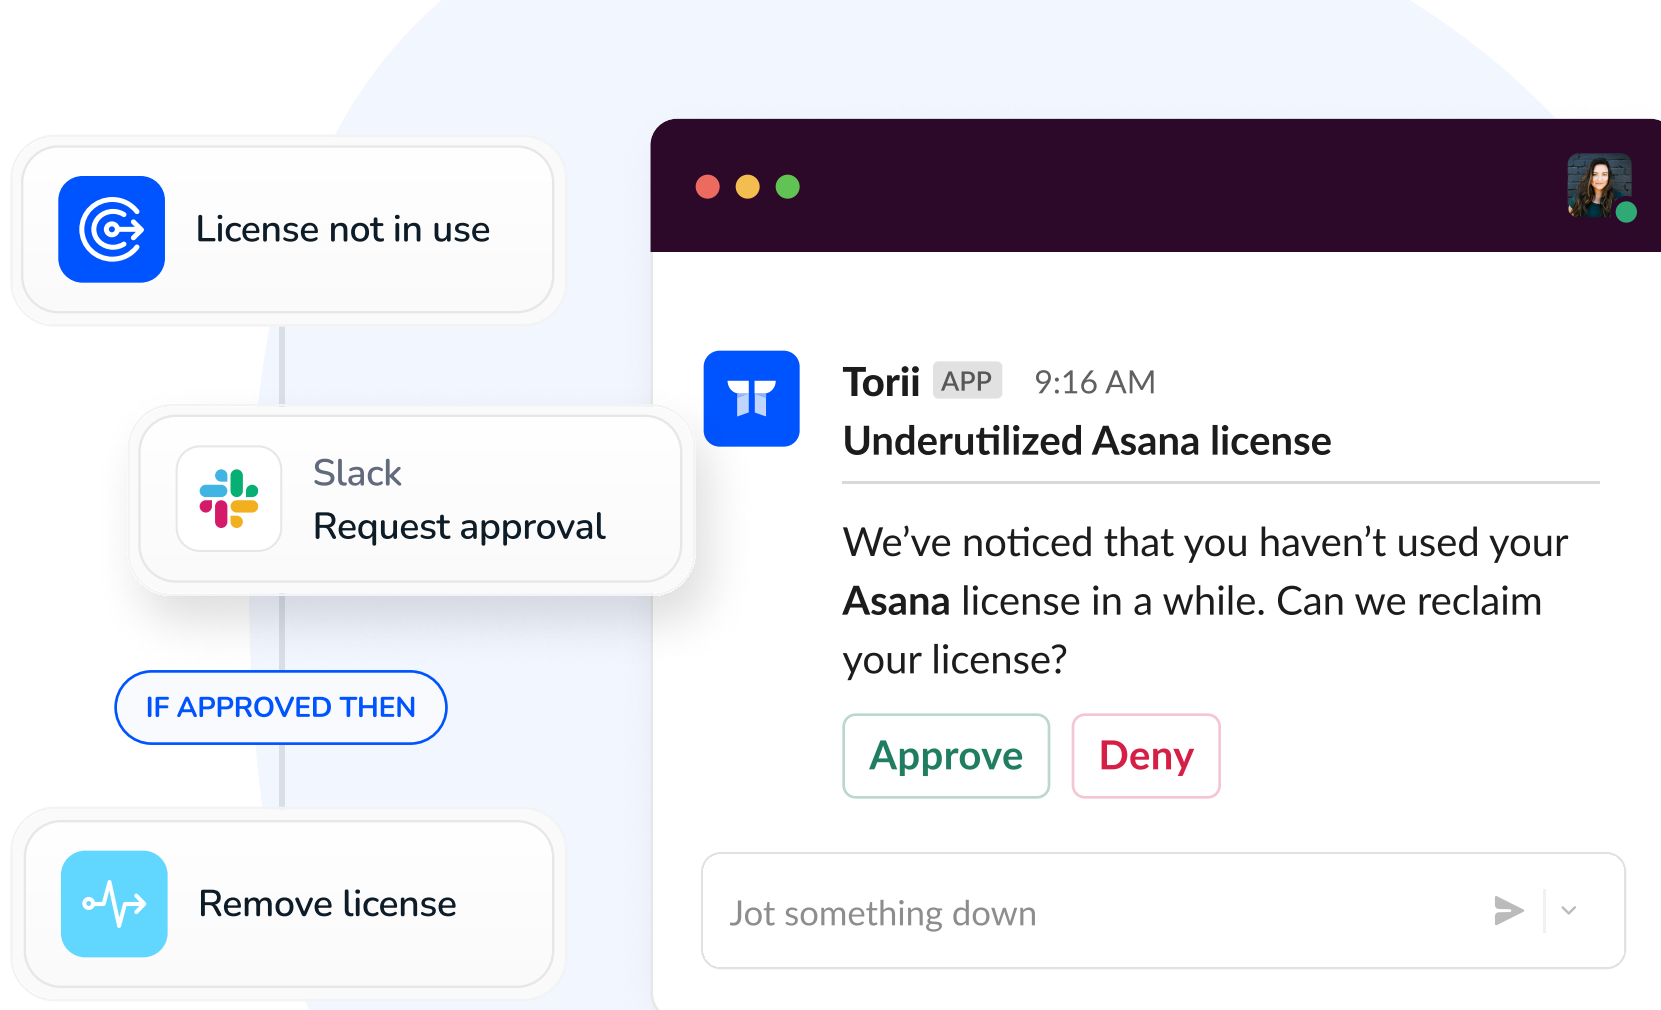

Offboard with Confidence

Protect your sensitive data with scheduled and real-time offboarding. Automatically remove users from every application—including Shadow IT—and monitor workflow progress with ease. Experience security and control, seamlessly integrated.

Streamline Access Requests

Effortlessly update user permissions according to role, department, and shifting employee status. Utilize Slack approvals to respond to access requests with just a click, bringing a new level of efficiency and harmony to your workflow.

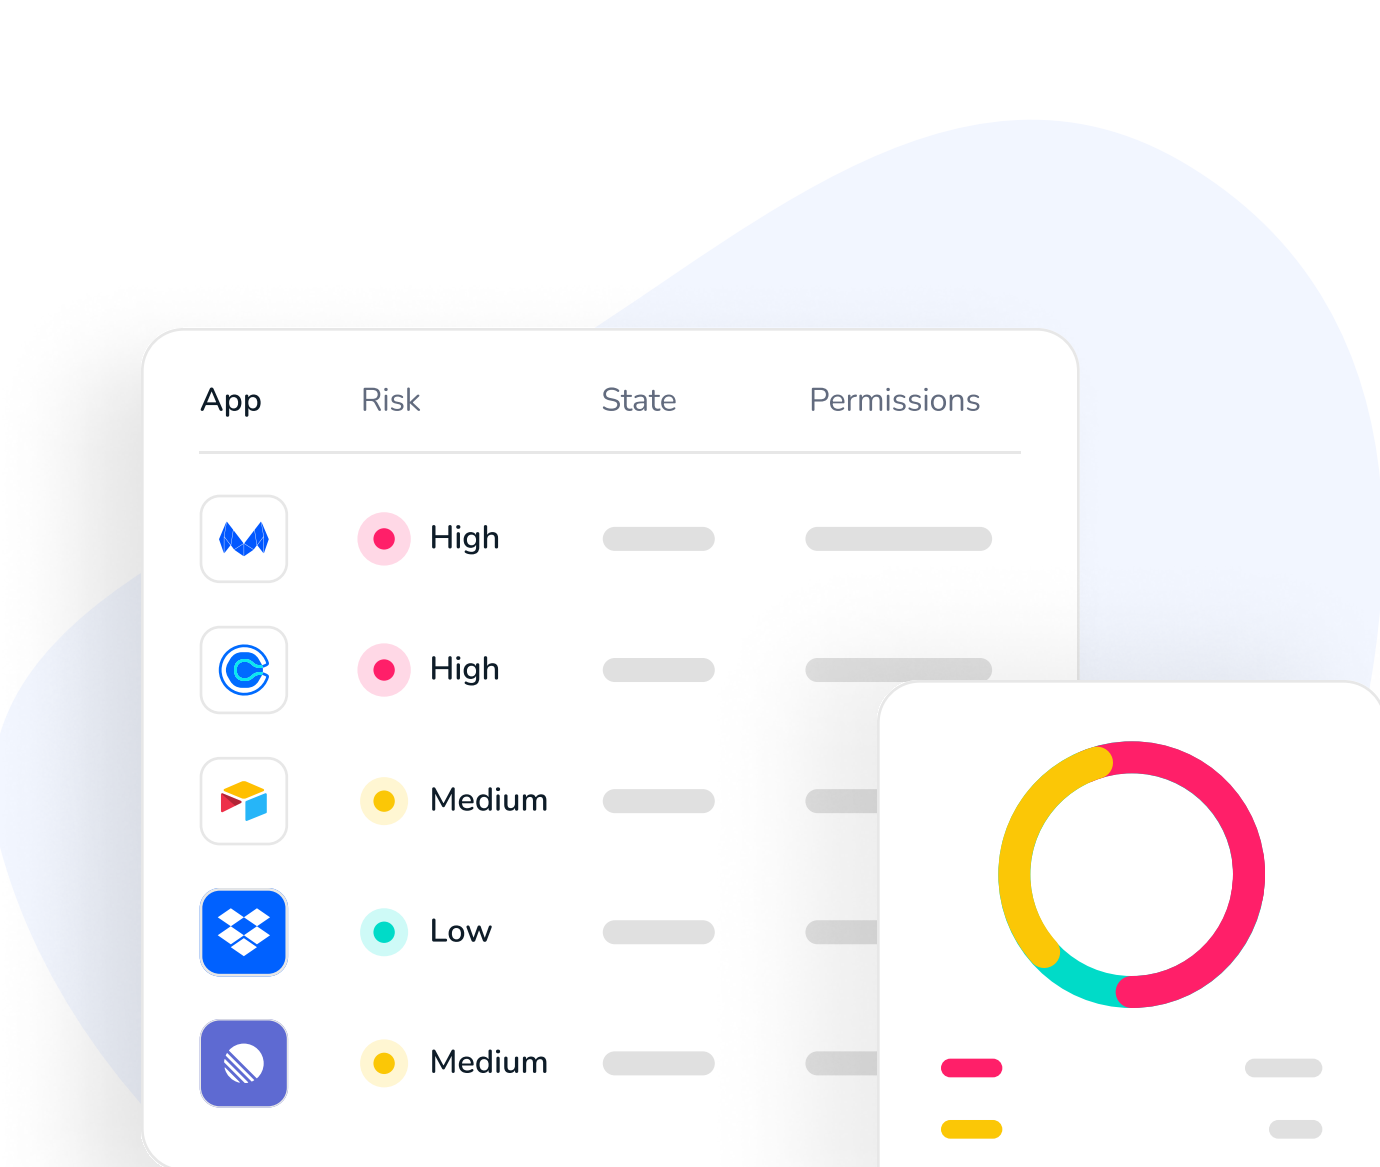

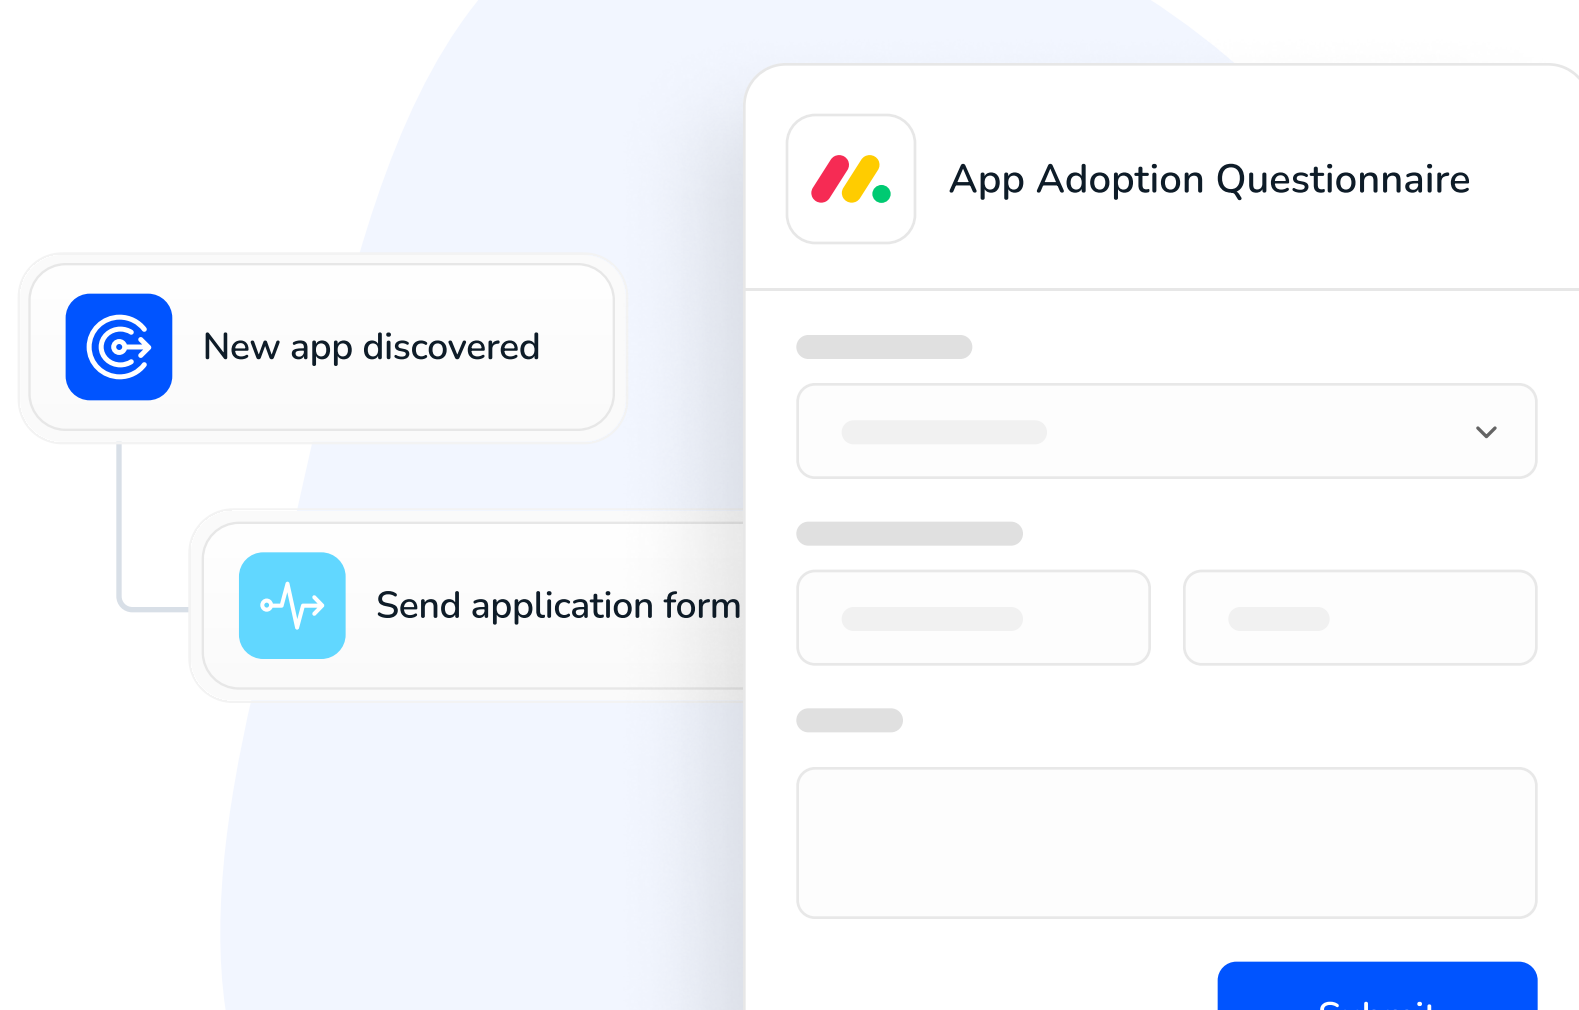

Unify Employee Management

Leverage the power of Torii's employee and license management workflows across essential IT tools such as Jira, Freshdesk, Zapier, and more and track their progress. Forge a unified workflow experience that's not only powerful but intuitive.

Put Application Lifecycle Management On Autopilot

Illuminate Shadow IT

Get automated notifications whenever a new app is adopted. Effortlessly engage new application owners with personalized questionnaires to gather essential SaaS information. Finally, true app oversight and control.

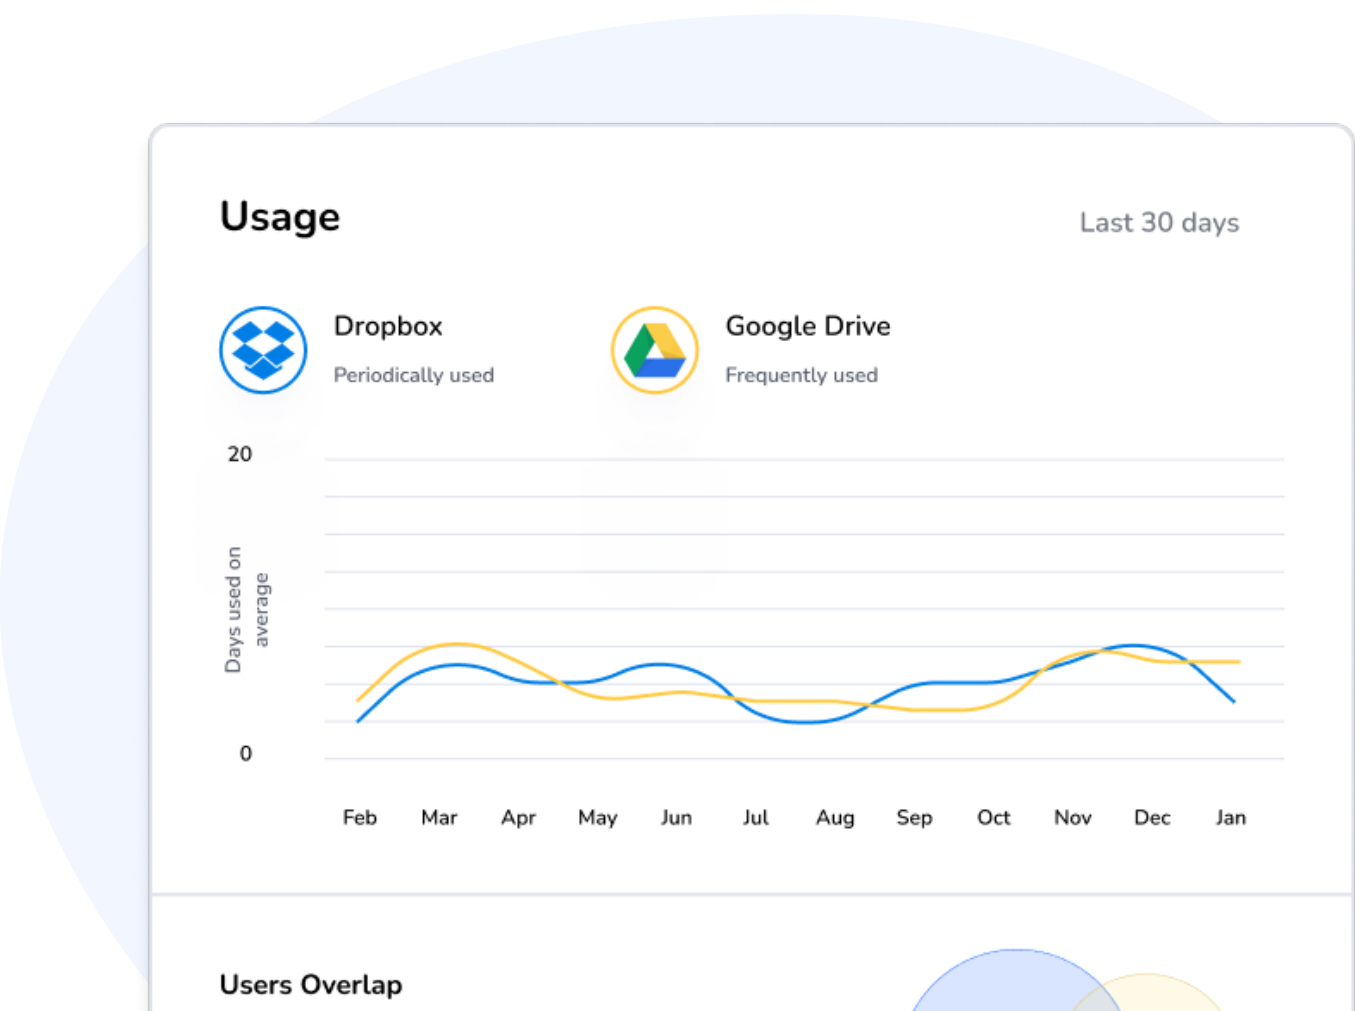

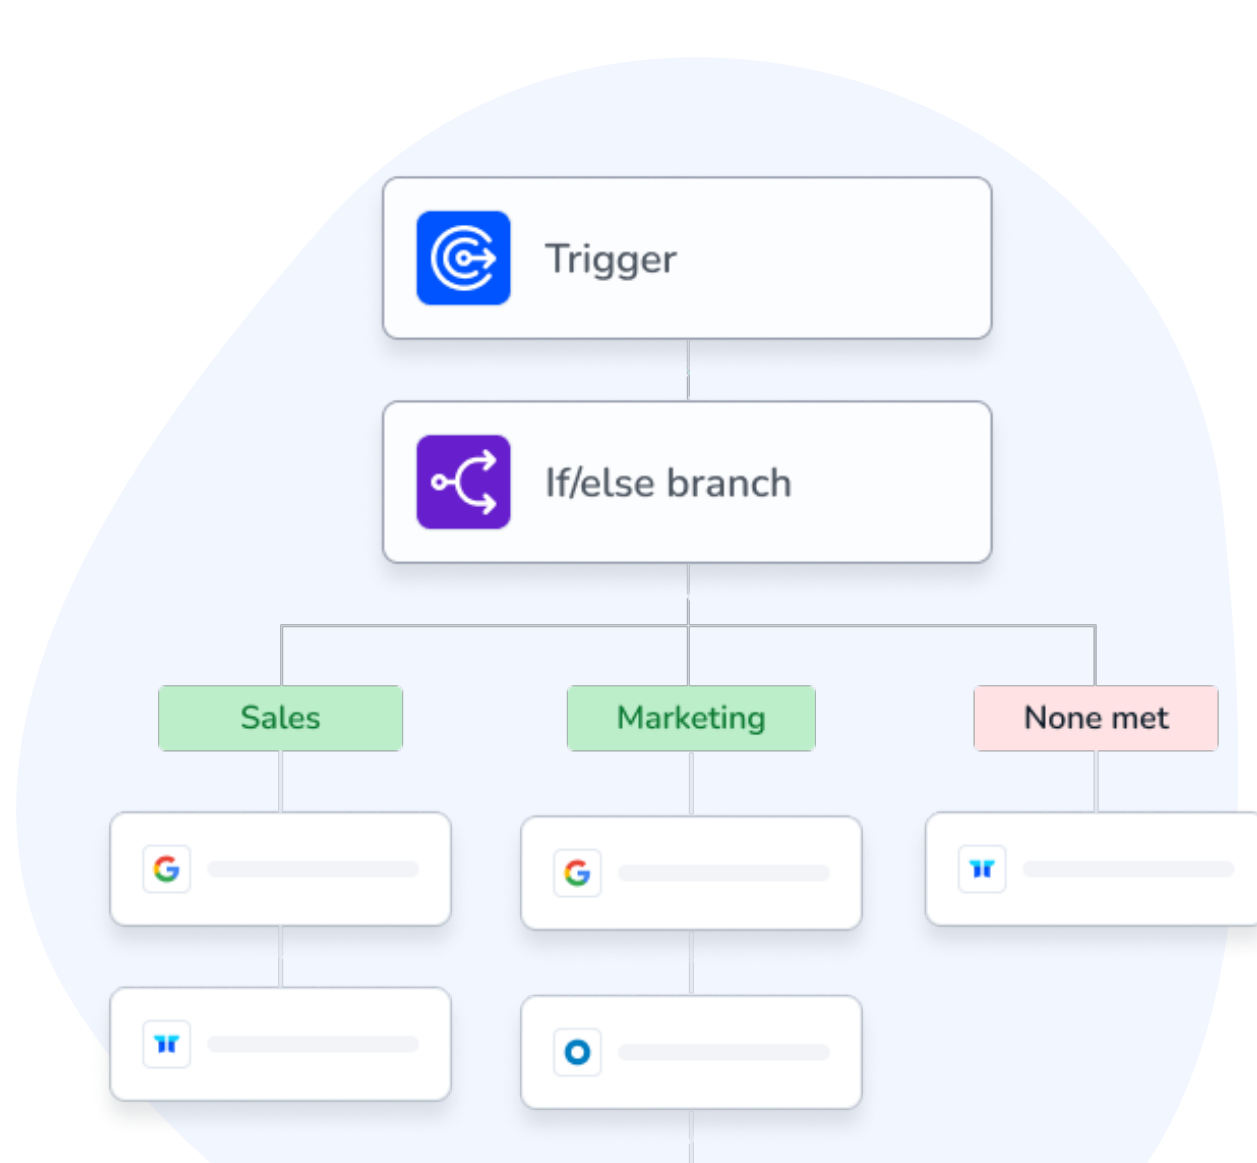

Remove Risky Apps

Streamline security evaluations and orchestrate workflows based on rich application risk profiles. Automatically manage risky app adoption and usage. Reinventing security for a connected world.

Intuitively Build Complex Workflows

Easily visualize and organize even the most complex automations with Torii's Canvas Workflow Builder and unlimited branching. Complexity made elegant.

Consolidate Redundant Tech

Get notified about redundant apps. Harmonize your SaaS stack with automatically generated side-by-side comparisons of apps, including purpose, utilization rate, expenses, and more. Technology management, refined.
